

SP AQUACLEAN septic tanks are meant for waste waters gathering and filtration. They are used in private houses sewer systems. The septic tanks are made of high strength environmentally friendly polyethylene, resistant to the impacts of corrosive medium and temperature difference.

Septic tank is a horizontal type sedimentation reservoir of 3500 l capacity, consisting of several chambers where the waste is being filtered. The unique ribbed surface of Aquaclean septic tanks prevents their uplift from the ground caused by the underwater forces.

Strong, seamless and impermeable body of these septic tanks safely encloses any unpleasant odor and prevents any leakage. The use of our septic tank allows preserving healthy environment. Except being used as a part of a sewer system these septic tanks can be used as storage reservoirs for all types of liquids or loose substances.
