

### Play ground complex for kids – AQUAGAME swing

It is an absolute safety and reliability, absence of sharp angles which can cause injuries, brightness of colors, resistance to discoloration, and, of course, environmentally friendly materials.

The swing is lightweight; it can be easily moved and installed at any playground.

In the nearest future Aquatech plans to enlarge the range of playground complexes, designed for young generation of different age groups.

For additional information concerning playground complexes, please address to our specialists.

Aquatech offers several variants of playground complexes for different age groups. The photos present several models of the yard playground complexes ("Zmeika", "Terem" and Aquagame swing).

The yard playground complexes are safe and reliable thanks to their construction that consists of a base frame of steel tubes, covered by polyethylene envelope (kemblic). The complex design is absolutely safe as there are no any sharp angles which can cause injury. Besides, imported raw material that is specially supplied for these complexes manufacturing, contains special additives, preventing discoloration of material under the sunlight.

Besides, Aquatech offers some separate elements of the playground complexes for kids: chute surface, "pen cases" and others.

## SPECIAL PURPOSE TOURISTS BOAT - KAYAK

**Polyethylene boat – kayak AQUABOAT** is the embodiment of an elegant design, lightness and, at the same time, reliability of construction. Its operational properties have been estimated by many amateurs of boating. The special feature of this "Aquatech" product is the use of a special high strength polyethylene that provides additional reliability and lightness of constructions. Such boat suits well not only for a row, but also for a long river traveling. Professionally designed shape of this boat provides minimum hydraulic friction and maximum flexibility, stability and handiness.
